從混沌到洞見：SRAF 智慧代理人框架

駕馭非結構化資料，實現可追溯的智慧分析

SRAF

NotebookLM

挑戰：資訊洪流中的情報失焦

大量非結構化文本

Daily reports, intel summaries, and dispatches create an unmanageable volume.

檢索與關聯困難

Key insights are buried, and connecting related events across documents is nearly impossible.

分析耗時費力

Manual reading, synthesis, and trend identification is a slow, laborious process measured in days, not minutes.

NotebookLM

我們的解決方案：SRAF - 自動化的智慧分析引擎

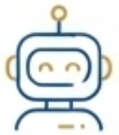

SRAF 將海量原始文本，轉化為 可查詢、可視覺化、可追溯 的結構化知識庫，並由 AI 代理人自動生成深度分析報告。

NotebookLM

實力展示：AI 代理人即時問答

「最近 3 個月 095 核潛艦活動情況？」

在最近 3 個月內，資料庫未顯示 095 核潛艦的任何偵測紀錄。最近的報導均為 2025 年 6 月，已超出查詢時間範圍。

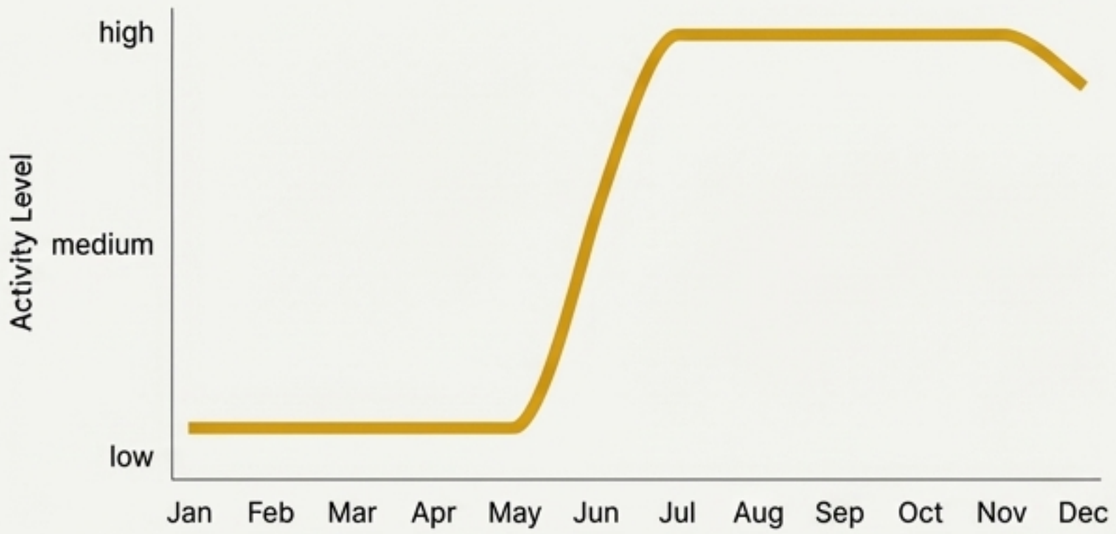

答案精確、誠實，且附帶來源驗證

NotebookLM

超越問答：自動化趨勢研判與 SWOT 分析

2025 年活動趨勢

AI's 結論：
年初低活動 → 6 月快速上升 → 6 月中後期持續高頻率

AI 生成 SWOT

S

隱蔽技術先進
(Advanced stealth technology)

W

高速造成噪音
(High speed creates noise risk)

O

累積反潛資料
(Opportunity to accumulate our own anti-sub data)

T

區域衝突風險上升
(Increased risk of regional conflict)

NotebookLM

SRAF 架構解析：三階段智慧引擎

NotebookLM

深度解析 (1)：將文本煉成黃金的「提詞工程」

我們不只使用 LLM，我們用一套嚴謹的規則框架 (MULTIDIM_EXTRACTION_Rule)，教會 AI 如何像專家一樣思考。

精準日期判讀 (Precise Date Parsing): Differentiates "民國年" (Minguo calendar years) and resolves four-digit ambiguities like "0724" (Is it a date or a time?).

SQL-Friendly 輸出 (SQL-Friendly Output): Guarantees all output is consistently formatted, ready for direct database ingestion and analysis.

逐字證據擷取 (Verbatim Evidence Extraction): Ensures every analysis is supported by an original text snippet, preventing fabrication.

Rule Example: `若出現「114 年 01 月 01 日」→`
`西元 = 民國年 + 1911 → 2025-01-01`

NotebookLM

深度解析 (2)：具備「可追溯性」的 AI 分析師

1. 工具調用 (Tool Use):
The AI Agent first queries the Elasticsearch database for all relevant structured events.

2. 綜合推理 (Synthesis & Reasoning):
The LLM receives the structured data to synthesize, compare, and identify trends.

3. 附帶引用 (Citation Generation):
Every statement in the final report is appended with a citation linking back to the original source document and text snippet.

偵測顯示潛艦在福建外海出現 [SOURCE 095 新型核潛艦_001_26]。

Source Snippet:
"0647 雷達偵獲 095 新型核潛艦 於 福建外海 出現..."

NotebookLM

規模化實力：以三萬筆模擬軍情文本驗證

~30,000 documents

Dataset Size: ~30,000 documents.

Data Diversity: Simulates two real-world intelligence formats: 「情勢摘要」& 「聯合情監偵回報」.

Key Result: SRAF successfully processed 100% of the text corpus into a structured, queryable knowledge base.

NotebookLM

SRAF 的核心優勢：一場分析範式的轉移

For Management & Decision-Makers

- **效率躍升 (Efficiency Leap):**
  Automated reports let analysts focus on high-value judgment.
- **決策品質 (Decision Quality):**
  Insights are based on comprehensive data, not scattered information.
- **可信賴的 AI (Trustworthy AI):**
  100% traceable citations eliminate AI ‘hallucinations.’

For Technical & Analytical Teams

- **釋放資料潛力 (Unleash Data Potential):**
  Transforms unstructured text into a programmable asset.
- **加速研究週期 (Accelerate Research Cycles):**
  Reduces research time from days of manual work to seconds of querying.
- **穩固的架構 (Robust Architecture):**
  Scalable and powerful, built on an Elasticsearch core.

NotebookLM

未來展望：從軍情分析到全領域知識引擎

SRAF 的框架具備高度通用性，可快速應用於...

NotebookLM

From Chaos to Insight: The SRAF AI Agent Framework

SRAF AI Agent Framework

Taming Unstructured Data for Traceable Intelligence Analysis

NotebookLM

The Challenge: Losing Focus in a Flood of Information

Massive Unstructured Text

Daily reports, intel summaries, and dispatches create an unmanageable volume.

Difficult to Search & Correlate

Key insights are buried, and connecting related events across documents is nearly impossible.

Time-Consuming Analysis

Manual reading, synthesis, and trend identification is a slow, laborious process measured in days, not minutes.

NotebookLM

Our Solution: SRAF - The Automated Intelligence Engine

SRAF transforms massive raw text into a **queryable**, **visualizable**, and **traceable** knowledge base, with AI agents automatically generating in-depth analytical reports.

NotebookLM

Power in Action: Live Q&A with the AI Agent

What is the activity of the Type 095 nuclear submarine in the last 3 months?

In the last 3 months, the database shows no detection records for the Type 095 submarine. The most recent reports are from June 2025, outside the query range.

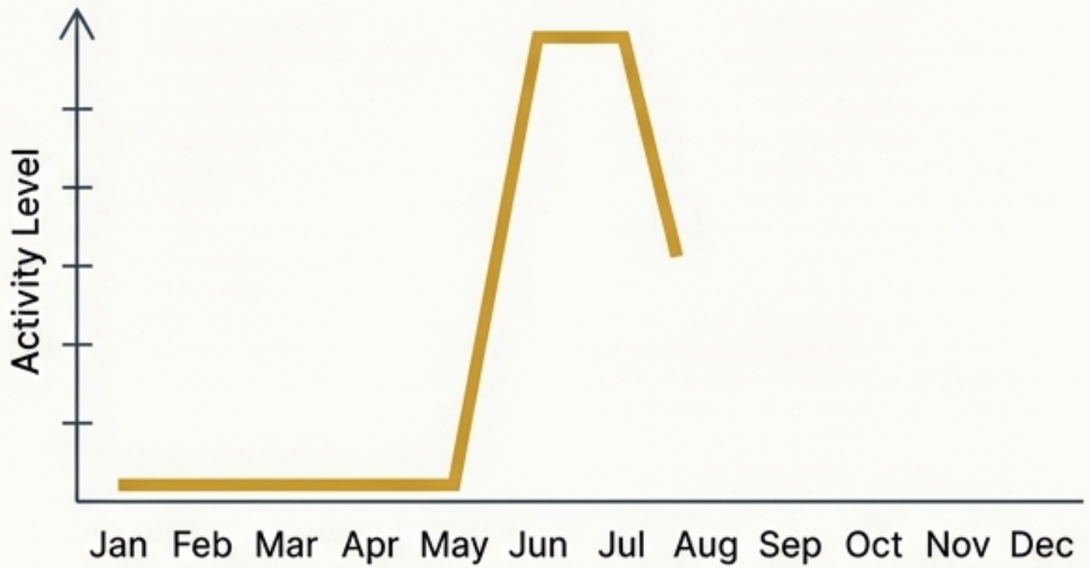

Answer is precise, honest, and comes with source verification.

NotebookLM

Beyond Q&A: Automated Trend & SWOT Analysis

2025 Activity Trend

Low activity early in the year → Rapid increase in June → Sustained high frequency in late June.

AI-Generated SWOT

S Advanced stealth technology

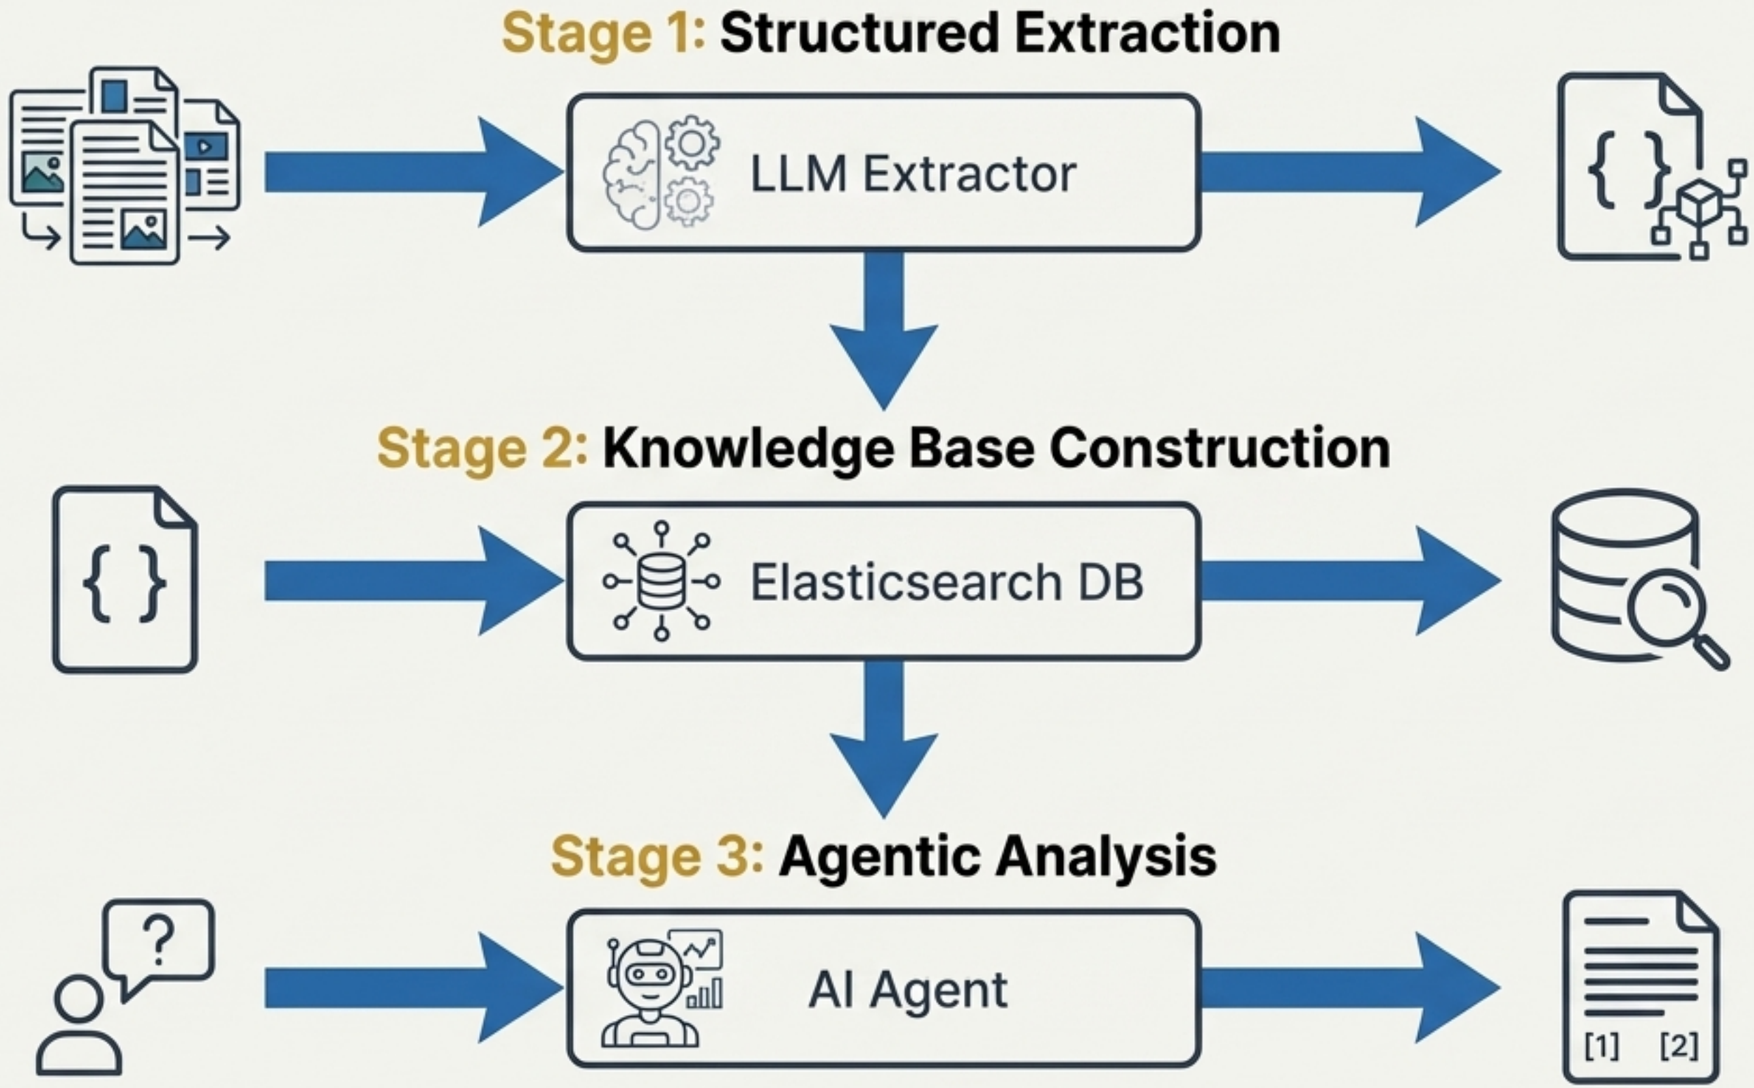

W High speed creates noise risk

O Opportunity to accumulate our own anti-sub data

T Increased risk of regional conflict

NotebookLM

The SRAF Architecture: A Three-Stage Intelligence Engine

NotebookLM

Deep Dive 1: The 'Prompt Engineering' That Turns Text into Gold

We don’t just use an LLM; we use a rigorous rule-based framework (`MULTIDIM_EXTRACTION_Rule`) to teach the AI to think like an expert.

Precise Date Parsing: Differentiates ROC calendar years and resolves four-digit ambiguities like “0724” (Is it a date or a time?).

SQL-Friendly Output: Guarantees all output is consistently formatted, ready for direct database ingestion and analysis.

Verbatim Evidence Extraction: Ensures every analysis is supported by an original text snippet, preventing fabrication.

```
Rule Example:
`Rule: Convert ROC year + 1911 to Gregorian year`
```

NotebookLM

Deep Dive 2: The AI Analyst with 'Traceability'

Agent Workflow

1. Tool Use: The AI Agent first queries the Elasticsearch database for all relevant structured events.

2. Synthesis & Reasoning: The LLM receives the structured data to synthesize, compare, and identify trends.

3. Citation Generation: Every statement in the final report is appended with a citation linking back to the original source document and text snippet.

Source Snippet:
`'0647 Radar detects Type 095 Submarine off the coast of Fujian...'`

Radar detection shows the submarine appeared off the coast of Fujian Inter Regular Medium **[SOURCE Type_095_Sub_001_26]**.

Traceability in Action
